

Hammad Naeem

Frontend Developer | Cybersecurity Enthusiast | TryHackMe Top 2% | Open to Internships

hammadnaeem160@gmail.com • 0328-3507169 • hammadnaeem.vercel.app • linkedin.com/in/hammad-naeem • github.com/Hammad-xureshi

PROFESSIONAL SUMMARY

Frontend Developer and Cybersecurity student building animated React apps with Three.js/Framer Motion and ML-powered security tools. Ranked Top 2% on TryHackMe. Awarded 2nd position among 50+ students for a real-time face & plate recognition toll system. Seeking a Frontend Engineer Internship.

TECHNICAL SKILLS

Frontend: React, Next.js, Vite, TailwindCSS v4, Framer Motion, Three.js, TypeScript, Responsive Design

Languages: Python, JavaScript, C++, Bash

Backend: Node.js, Express.js, Flask, FastAPI, REST APIs

Security: Kali Linux, Penetration Testing, Malware Analysis, Reconnaissance, CTF

DB & Tools: MySQL, PostgreSQL, Docker, Git, GitHub, Figma, Linux CLI

PROJECTS

Smart Toll Management System 2025

Python · PyQt6 · OpenCV · EasyOCR · face_recognition · MariaDB

- Awarded 2nd position among 50+ students — offline toll system with real-time face & license plate recognition
- Achieved 92%+ plate detection accuracy on Pakistani formats using EasyOCR with custom preprocessing pipeline
- Built PyQt6 dashboard with live dual-camera feed, automated balance deduction & transaction audit logging

Portfolio Website v2 2026

React · Vite · TailwindCSS v4 · Framer Motion · Three.js

- Built animated portfolio with Three.js WebGL particle effects and Framer Motion micro-interactions
- Implemented custom smoky cursor trail rendering 60fps across mobile and desktop browsers
- Configured Vercel deployment with asset optimization, reducing initial load to under 2s

AI Research Agent 2025

FastAPI · Groq LLaMA 3.3 70B · Tavily · Flutter · SQLite

- Built full-stack AI research agent with persistent memory, PDF export & multi-session management
- Designed Flutter UI with real-time token streaming achieving under 200ms first-token latency
- Integrated Tavily search API and Groq LLaMA 3.3 70B inference with automatic source citation

CyberWall — Security Monitoring System 2025

Python · Flask · MySQL · Machine Learning

- Built ML anomaly detection using Isolation Forest, flagging suspicious IPs with 94%+ accuracy on test dataset
- Developed Flask dashboard visualizing 10+ attack types with real-time risk scoring & automated blacklisting

Surface X — Bash Recon Framework 2025

Bash · Linux · Penetration Testing

- Built Bash recon framework with 60+ vulnerability patterns, parallel execution & stealth in-memory ops used in 10+ CTFs

EDUCATION

Bachelor of Science in Cybersecurity 2024 – 2028 (Expected)

Quaid-e-Awam University of Engineering, Science & Technology (QUEST), Nawabshah

CERTIFICATIONS

Verified:

- PITP Phase-II: Cyber Security & Ethical Hacking — Sukkur IBA / Govt of Sindh (2025)
- OPSWAT Academy: Introduction to Critical Infrastructure Protection (2025)
- TryHackMe: Advent of Cyber 2025 — 24 Challenges Completed
- Kairos Sec: File Upload Attacks — Guided Lab (2026)

Relevant Training:

- Zero Trust Architecture • Bug Bounty Hunting Fundamentals • Password Cracking (JtR & Hashcat)

ACHIEVEMENTS

- TryHackMe: Ranked Top 2% globally — 200+ rooms covering OWASP Top 10, privilege escalation & network security
- Open Source: 30+ GitHub repositories with consistent contribution activity across frontend & security projects
- Active CTF participant in web exploitation, cryptography & forensics — ranked Top 2% on TryHackMe platform
