

Hammad Naeem

Frontend Developer | Cybersecurity Enthusiast | TryHackMe Top 2% | Open to Internships

hammadnaeem160@gmail.com • 0328-3507169 • hammadnaeem.vercel.app • linkedin.com/in/hammad-naeem • github.com/Hammad-xureshi

PROFESSIONAL SUMMARY

Frontend Developer and Cybersecurity student with hands-on experience building modern web applications using React, Vite, TailwindCSS v4, Framer Motion, and Three.js. Ranked Top 2% globally on TryHackMe with active CTF participation and expertise in ethical hacking and penetration testing. Passionate about creating performant, visually compelling interfaces. Seeking a Frontend Engineer Internship to contribute to real-world products.

TECHNICAL SKILLS

Frontend: React, Vite, TailwindCSS v4, Framer Motion, Three.js, HTML, CSS, JavaScript

Languages: Python, JavaScript, C++, Java, Bash

Backend: Node.js, Express.js, Flask, FastAPI, REST APIs

Security: Kali Linux, Penetration Testing, Malware Analysis, Reconnaissance, CTF

DB & Tools: MySQL, PostgreSQL, Docker, Git, GitHub, Linux CLI

PROJECTS

Portfolio Website v2

2025

React · Vite · TailwindCSS v4 · Framer Motion · Three.js

- Engineered a fully animated personal portfolio with dark-purple aesthetic and responsive layout
- Built custom Three.js WebGL smoky cursor trail and magnetic Framer Motion button interactions
- Deployed on Vercel with optimized public asset pipeline for zero broken paths in production

AI Research Agent

2025

FastAPI · Groq LLaMA 3.3 70B · Tavily · Flutter · SQLite

- Built full-stack AI research agent with persistent conversation memory and PDF export capability
- Animated Flutter mobile UI with real-time streaming responses and multi-session management
- RESTful FastAPI backend integrated with Tavily web search and Groq inference API

CyberWall — Security Monitoring System

2024

Python · Flask · MySQL · Machine Learning

- Designed ML-based anomaly detection using Isolation Forest algorithm with automated IP blacklisting
- Built real-time risk scoring engine and attack visualization dashboard for threat analysis

Surface X — Bash Recon Framework

2024

Bash · Linux · Penetration Testing

- Created terminal-based recon and vulnerability detection framework with 60+ security patterns
- Implemented parallel execution and stealth in-memory operations for pentesters and bug hunters

EDUCATION

Bachelor of Science in Cybersecurity

2024 – 2028 (Expected)

Quaid-e-Awam University of Engineering, Science & Technology (QUEST), Nawabshah

CERTIFICATIONS & COURSES

- Password Cracking (John the Ripper & Hashcat)
- Bug Bounty Hunting Fundamentals
- Zero Trust Architecture
- Social Engineering Techniques
- Malware Analysis
- Python Web Scraping
- Data Structures & Algorithms

ACHIEVEMENTS

- TryHackMe: Ranked Top 2% globally among cybersecurity practitioners worldwide
- CTF Competitions: Active participant with practical offensive and defensive security skills
